Feature-rich online macros utility makes your data automation more convenient. KEYMACRO is an information manager that can handle all types of data. Its strength lies in the ability to take files from any location (such as the disk drive, an FTP site, web pages, databases or the internet) and save them into appropriate fields in a document or database. The program has a solid and stable keystroke logging engine, so it can record any information typed on the keyboard. Users can then use it to automate various tasks, such as to export a report, fill in an online form, create mail merge documents, copy and paste text and so on. It has a large number of functions that can be quickly activated using the mouse. KEYMACRO enables you to easily record the mouse movements and clicks on your screen, as well as the text, graphics, and multimedia files. The program's keystroke logging features allow you to fill any application fields, such as browsers, and collect the user's keyboard commands and run them by mouse clicks. I am just trying to decode the string and then save it as a normal string A: You get an error because the method b64decode in the package base64 does not exist. The method is binary2decode in the package binascii. Your code should be: import binascii base64_string = binascii.binary2decode(data) If you want to get a string from your base64, you can use the function from the package base64 base64.b64decode(data) Q: Getting the encoded string from DOME

What's New In Ovis Pdf-FieldMerge?

Ovis pdf-FieldMerge is a straightforward piece of software that aims to provide you with all the necessary means to fill in PDF forms. In other words, the program can read FDF, CSV, and XLS database files and automatically fill form fields and export the results to PDF. This makes the utility very well-suited for users who need to generate secure PDFs with unchangeable or user-definable fields from databases, spreadsheets or CSV files. The tool's main goal is to streamline the whole process of creating PDFs based on spreadsheets or databases, a fact that becomes clearly visible once you first launch the app. Simple and efficient user interface There are no all-encompassing toolbars or such elements, as you only get a slim menu bar and the rest of the features can intuitively be accessed from the app's simple main window. Consequently, getting to grips with Ovis pdf-FieldMerge should not pose any difficulties even for beginner users out there. You need to only choose the locations for the PDF template, the spreadsheet, database or CSV file and, of course, the output source location. Everything you need is right in front of you, in the main window Not only this, but the application can also help you save a database file to single or multiple PDFs, to export PDF and simple form field names, export all entries as PDF or XFDF files, as well as 'flatten' the database fields. Merge variable, CSV, graphic data from spreadsheets or databases with PDF templates Taking all of the above into careful consideration, Ovis pdf-FieldMerge is an efficient software solution that is perfectly aimed at users who need to transfer data from spreadsheets or databases.
